Executive Summary

The potential for Dry Mix is medium to high given the availability of local raw materials of limestone, cement and gypsum, this coupled with the trend in use of moving away from the traditional mixing of dry mix plaster on site to the new technological advancement in pre-prepared dry mix at plant and then delivered on site provides an accuracy of the required mix of ingredients and efficiency of application on the required surface.

Currently the competition is limited in Oman with one major player operational selling price the product in bulk at the rate of 30/RO per ton. The pre-feasibility study calculated 25/RO per ton given the possible fluctuation in prices and conservative lower price per ton to compete. The total land is estimated at 5,000sqm and required built up area for plant and offices is estimated at 2,500sqm

The cost of investment for plant and machinery amounts in the region of 0.6 million RO and the proposed production is estimated at 38,400 tons in year 1 accounting for 40% of the installed capacity. The estimated imported demand of 300,000 tons per year. The local markets is sufficient to cover the production capacities with potential for exports to be increased thus requires penetration of regional markets.

In terms of profitability the gross profit margin is 20% in year 1 the initial 3 years and reaching a maximum of 27% in year 6th year, whereas the net profit is 1.3% in year 1 reaching a maximum of 17.6% in the 6th year.

PROJECT HIGHLIGHTS

Name of Project: Dry Mix Plant.

Total Investment Cost: 964,350 OMR

Plant Cost: 630,000 OMR

Building Cost: 231,750 OMR

Plant Capacity: The proposed Plant will have & installed capacity of 38,400 tons in 1st year operation.

Local Market Demand. The total estimated Oman import demand 300,000 tons.

Source of finance: 60% Debt & 40% equity.

Total Investment

- 964,350 OMR
- Total Production Capacity 1st year = 38,400 tons

Production capacity

- Year 1 = 40%
- Year 2 = 50%
- Year 3 = 60%
- Year 4 = 70%
- Year 5 = 80%
- Year 6 = 90%
- Year 7 = 90%

Revenue

- Yr 1= 1.0 million OMR
- Yr 2= 1.3 million OMR
- Yr 3= 1.6 Million OMR
- Yr 4= 1.8 Million OMR
- Yr 5= 2.1 Million OMR
- Yr 6= 2.4 Million OMR

Broad Scope of Study & Methodology

This feasibility study covers three main area's to include market research, evaluation of the technical aspects and the financial analysis to determine the feasibility of the project.

The **Market Assessment** consists of:

- Market size of Dry Mix in Oman.
- Overview of the local competitors in Oman & GCC region.
- Supply & Demand: estimate the supply & demand of Dry Mix products to include import, export & review of competition in the GCC region.
- Market share of the proposed new plant.

The **Technical Part** of the Study comprises all technical requirements needed to render the Dry Mix plant operational to include capacity utilization, raw material, staff requirements & process flow.

The **Financial Analysis** for the project covers the following:

- Cost of the project (total investment)
- Source of Finance (equity & debt)
- Financial assumptions
- Financial schedules comprising:
 - Projected Income Statement
 - Projected Balance Sheet
 - Projected Cash Flow Statement
 - Projected Revenue Stream
 - Depreciation Schedule
 - Salaries (Number of required employees & the expected Salaries)
 - Loan repayment Schedule
 - Finance Cost
 - Financial Ratios
 - Internal Rate of Return & Payback period.

Introduction

1.1. Introduction Dry Mix

The concept of dry mix is used for plastering, masonry, tile adhesives, flooring screed, and repairing of buildings in construction, the dry mix is based on limestone as the main ingredient and cement being the main binder. The dry mix mortar products are available in pre-bagged form or in bulk by means of silo and can enable significant enhancement on building quality based on simple mix and apply operations.

1.2. Dry Mix Products & Applications

Dry mix mortars are used in many different applications in the construction of a building. Some of these applications are universal and some others are specific to certain regions or countries.

The key dry mix products and applications in Oman and within the GCC region are as follows:

- a. Tile adhesives
- b. Gypsum Plaster
- c. Renders and plasters based on gypsum or cement (coloured)
- d. Tile grouts (Non Shrink Grout)
- e. Self-leveling screeds
- f. Brick-laying masonry mortars & Repair mortars

The advantages for dry mix mortar include:

1. Factory made dry mortar with quality certification as per standards.
2. Usage of local quality raw materials as per the applicable standards
3. Green products for environment sustainability (waste raw materials by products of marble and aggregate sands can be a substitute)
4. Educating the users on good construction practices and quality of the contents
5. Pursuing the industry to deliver structures with good standards
6. Testing of products for all technical parameters and creating awareness about the technical attributes to users for choosing the right product
7. Proper quantification of materials and reduction in wastage
8. Speed
9. Hassle free and ease of application and usages

1.3. Project Overview

Dry mix products provide excellent technical properties to meet the stringent performance requirements that are common in the current construction scenario. Additionally, the use of dry mix mortar products is economical as they reduce the potential construction problems with the long-term integrity of structures with a simple materials approach.

Dry mixed mortar contains the precise blend of materials and only requires the addition of water to produce a suitable render. Dry mix mortar comprises of special additives that improve the workability of renders and help them bond to the background and reduce the risk of cracking. They can be also used for decorative finishes. Rendering is done in almost all of the construction applications to achieve a smooth or deliberately textured surface.

This project entails the set-up of a new Dry Mix Plant. The production output of the new proposed plants will focus on certain Oman market.

| Target Market | |
|------------------------------|------------|
| Oman Import Substitution 80% | Export 20% |

Assumptions

- Market Rate Selling Price amount to 30 – 34 RO per ton study has estimated a lower value of 25 /RO.
- Target Market Local 90% Export 10%
- Omanisation achievable at minimum rate of 70%.
- Welfare estimated at 15% covering for Tickets, Holidays & Other employee expenses.
- 2 shift system
- Working Capital for Raw material and Salaries is for 3 months

Production Capacity

| PRODUCTION CAPACITY | | |
|--------------------------|--------|---------------|
| Total Installed Capacity | 96,000 | tons per year |
| Installed Capacity | 20 | Tons per Hour |
| No of Shifts | 2 | Per Day |
| No of Hours Per Shift | 8 | Per Shift |
| Working Day Per Year | 300 | days |

The proposed Dry Mix Plant products consist of 2 types of products size:

| Si.No. | Description | Size kg |
|--------|-------------|---------|
| A | Bag | 50 |
| B | Bulk | 1,000 |

Market Analysis

Market Analysis

2.1. Market Overview

Increasing construction activities in GCC, is expected to drive the use of dry mix mortar in rendering over the coming years, and construction activities have a preference for cost-effective construction techniques, and are favoring this product given the market growth in countries such as UAE and KSA.

GCC is among the global drivers in the consumption of dry mix products, owing to the huge infrastructure and residential growth taking place in these countries. KSA government has rolled out massive construction plans, including making provision for huge residential projects. In Oman, the trend of dry mix mortar is catching up for the past 2-3 years and is showing a good prospect for the future in the construction industry and by using dry mortar products the quality and speed of construction increases.

Dry mortar is dry powder or granular material made by mixing dried screening process of fine aggregate, cementitious materials, additives, fillers, etc. Most of the dry mortar products contain both mineral cementitious binder (e.g. OPC) and polymer binder (e.g. re-dispersible powder) and they are normally packed in bags after mixing in the factory.

In recent years, with the continuous improvement of environmental protection requirements, it has become an urgent task of the local building authorities to promote the use of dry mortar. One key factor that has been driving the demand is the ability of these products is to save labor costs; with the use of specialized application equipment, substantial improvement in workmen efficiency and output has been reported due to the use of these products.

Table 2-1: Oman Dry Mix Export During the Period (2013-2017)

| | 2013 | 2014 | 2015 | 2016 | 2017 | AGV |
|-----------------|-------|-------|-------|------|-------|---------|
| Value USD (000) | 241 | 293 | 321 | 45 | 678 | 315.6 |
| Weight in Ton | 1,515 | 1,136 | 2,013 | 306 | 7,621 | 2,518.2 |

Source: Trademap.com 381600 HS Code

Figure 2-1: - Dry mix Exporting Value USD (000)

The export for Dry Mix amount to 241,000 USD in 2013. In the following year 2014 the total export increased to a total of 293,000 USD. In 2015 the export increased to 231,000 USD, in 2016 the total export decreased significantly to a total of 45,000 USD. In 2017 the total export of Dry Mix increased significantly to a total of 678,000 USD.

Figure 2-2: Dry mix Exporting Weight Ton

The export for Dry Mix amount to 1,515 tons in 2013. In the following year 2014 the total export decreased to a total of 1,136 tons. In 2015 the export increased to 2,013 tons, in 2016 the total export decreased significantly to a total of 306 tons. In 2017 the total export of Dry Mix increased significantly to a total of 7,621 tons.

Table 2-2: Oman Dry Mix Import During the Period (2013-2017)

| | 2013 | 2014 | 2015 | 2016 | 2017 | AGV |
|-----------------|---------|---------|---------|---------|--------|---------|
| Value USD (000) | 25,158 | 29,188 | 33,356 | 32,585 | 15,716 | 27,201 |
| Weight in Ton | 117,845 | 120,601 | 297,343 | 335,141 | 93,225 | 192,831 |

Source: Trademap.com 381600 HS Code

Figure 2-3: Dry mix Importing Value USD (000)

The imports for Dry Mix amount to 25.1 Million USD in 2013. In the following year 2014 the total import increased to a total of 29.1 Million USD. In 2015 the import increased to 33.3 Million USD, in 2016 the total import decreased to a total of 32.5 Million USD. In 2017 the total import of Dry Mix amount reduced significantly to a total of 15.7 Million USD.

Figure 2-4: Dry mix Importing Weight Ton (000)

The imports for Dry Mix amount to 117,845 tons in 2013. In the following year 2014 the total import increased to a total of 120,601 tons. In 2015 the import increased significantly to 279,343 tons, in 2016 the total import increased to a total of 335,141 tons. In 2017 the total import of Dry Mix amount reduced significantly to a total of 93,225 tons.

Table 2-3: GCC Dry Mix Imports During the Period (2013-2017)

| | 2013 | | 2014 | | 2015 | | 2016 | | 2017 | |
|----------------------|---------|---------|---------|---------|---------|---------|---------|---------|---------|---------|
| | V (000) | Q (Ton) | V (000) | Q (Ton) | V (000) | Q (Ton) | V (000) | Q (Ton) | V (000) | Q (Ton) |
| Saudi Arabia | 54,620 | 61,169 | 52,469 | 63,548 | 49,872 | 60,545 | 35,318 | 51,112 | 43,373 | 59,495 |
| United Arab Emirates | 39,609 | 45,140 | 41,818 | 49,389 | 26,453 | 32,889 | 20,502 | 28,075 | 22,338 | 31,319 |

Source: Trademap.com 381600 HS Code

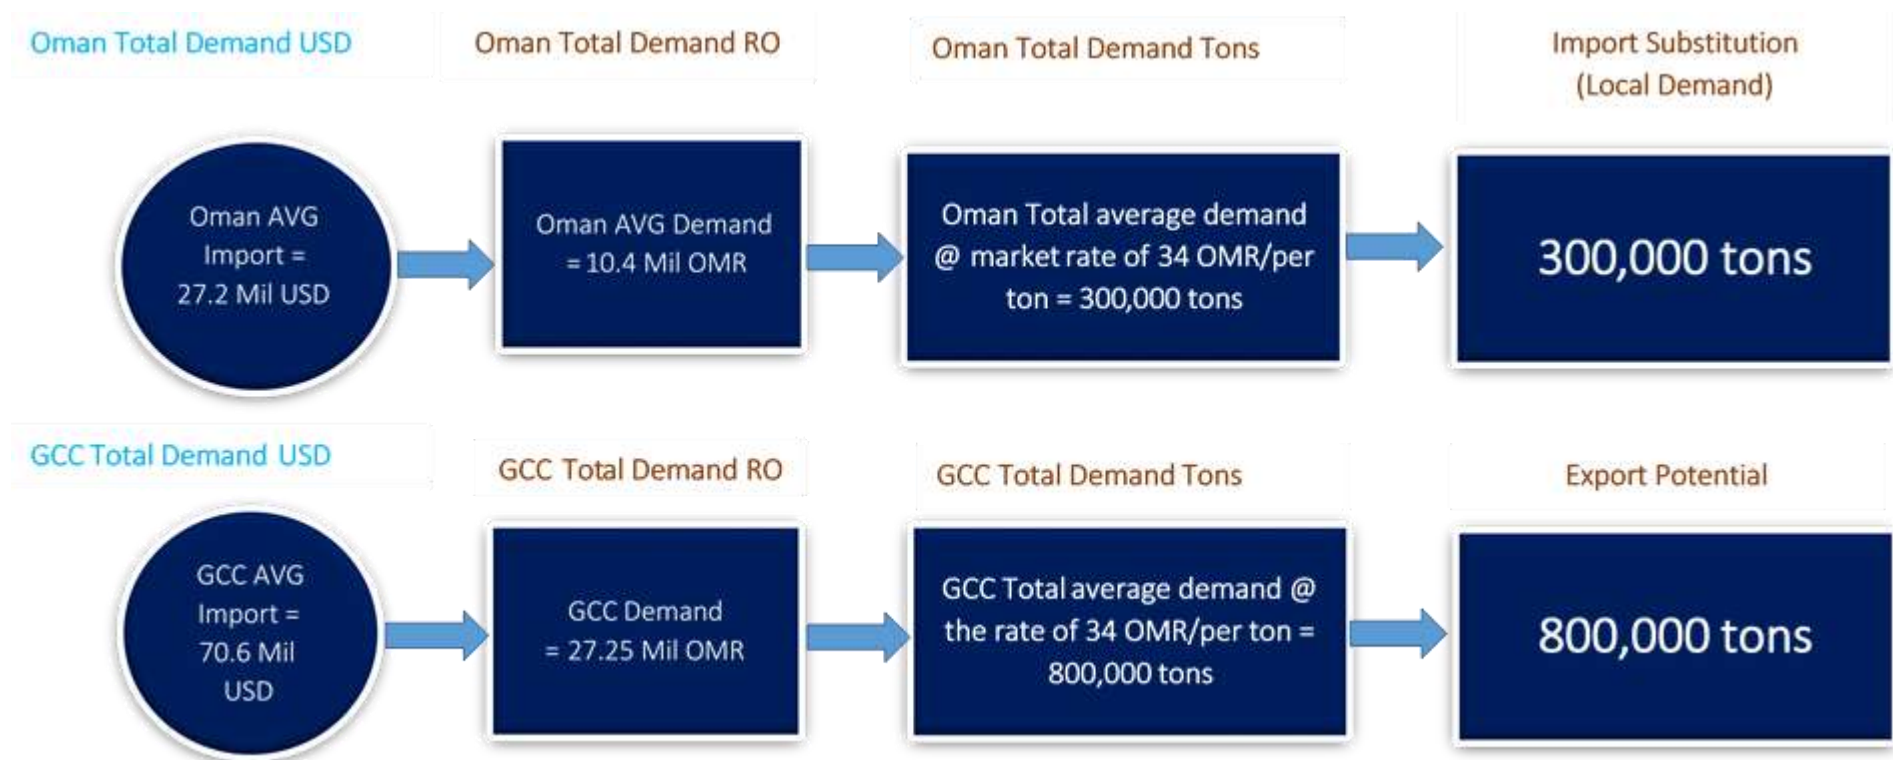

Figure 2-5: GCC Dry Mix Imports During the Period (2013-2017) – Value

Supply & Demand

The Oman imports of dry mix is estimated at 300,000 tons per year and 800,000 tons for the entire GCC market.

Market Share

It is estimated and assumed to capture a 1% market share of GCC market as export potential (20% of production) and 10% market share of import substitution (80% of production)

2.2. Major Competitors - Oman

Oman Plaster – A manufacturer of dry mix products with its manufacturing facility (German Equipment's) located in Sohar Industrial Estate; product range covers pre-blended dry mix products based on Cement and Gypsum.

Oman Plaster operation utilizes a silo system with pneumatic dry mix conveying and automatic application machines, products are accurately produced quality tested and delivered to the site in silos or bags.

| Products | Application Details | Packing |
|------------------------------------|---|-----------------|
| Dash Coat | Dash coat material to achieve good key for rendering on normal fair faced concrete surfaces. Application by tyrolean box/spray hopper | 50 kg bags |
| Cement Plaster/Render | Plaster/render for internal/external concrete block walls. Application by spray machine/manual | Silo/50 kg bags |
| Cement Render | Render for external plinth areas. Application by spray machine/manual | Silo/50 kg bags |
| Cement Plaster/Render | Plaster/render for high strength (> 15 MPa) requirements. Application by spray machine/manual | Silo/50 kg bags |
| Decorative Colour Render | Decorative colour render for external block walls. Application by spray machine/manual | Silo/50 kg bags |
| Render for rock work | High strength (> 15 MPa) decorative textured color render for landscaping works. Application by spray machine/manual | Silo/50 kg bags |
| Gypsum Plaster | Standard gypsum plaster for internal AAC/concrete block walls. Application by spray machine/manual | Silo/25 kg bags |
| Masonry mortar for concrete blocks | Block laying mortar for concrete masonry block works. Mixing by screw machine/manual. | Silo/50 kg bags |
| Masonry mortar for AAC blocks | Block laying mortar for AAC masonry block works. Mixing by screw machine/manual. | Silo/50 kg bags |
| Tile Adhesive | Tile fixing adhesive for ceramic tiles on internal /external areas. Mixing by screw machine/manual. | 50 kg bags |
| Floor Screed (10 MPa-40 MPa) | Bonded/un bonded/floating leveling screed for floors. Mixing by screw machine/manual. | Silo/50 kg bags |
| Repair Mortar | Fine repair mortar for concrete surfaces. Mixing by screw machine/manual. | 50 kg bags |
| Non-shrink grout | Non-shrink grouting mortar for medium strength (40 MPa) anchoring applications. Mixing by screw machine/manual. | Silo/50 kg bags |
| Thermo render | Thermal insulation render for external walls ($\lambda = 0.1$ W/m.K). Application by spray machine | Silo/20 kg bags |
| Thermo adhesive | Thermo adhesive for EPS/XPS thermal insulation sheets. Mixing by screw machine/manual. | 50 kg bags |

2.3. Regional Competitors – UAE

| Company | Company Status | Unit | 2017 | 2016 | 2015 | 2014 | 2013 |

UAE Competition Based on Survey

A survey was conducted to investigate the current competition in UAE, survey revealed several major dry mix manufactures these are listed in the opposite table.

| No. | Company | Location |
|-----|-----------------|-----------|
| 1 | Plaxit | Abu Dhabi |
| 2 | Conmix | RAK |
| 3 | Dubai Plaster | RAK |
| 4 | Sareto | Abu Dhabi |
| 5 | Sadamco | Abu Dhabi |
| 6 | Exceed Proemium | Abu Dhabi |
| 7 | Fine Mix | RAK |

Technical Evaluation

3.1. The Usage of Dry Mix Plasters and Mortars in Oman

There is a scope for wide usage of dry mix mortar mainly through renders and plaster and currently there is a huge quantity of mortars that are produced at site in the traditional manner. There are instances of failure and problems in masonry and plaster. Therefore, to ensure better performance and durability, dry mix mortars are a better alternative to the site mixed mortar.

| Site Mixed Mortar | Premixed Dry Mix Mortar Made at a Factory |
|--|---|
| Proportions: A definite ratio of cement and other additives are mixed followed by addition of water thereafter which the wet mortar is applied. | Proportions: Ingredients are tested and then mixed in a dry mix mortar plant |
| Quality: Quality of mortar depends on the quality of ingredient materials, ratio of mixing and the uniformity in the mix. Hence quality is not guaranteed | Quality: Binders, aggregates and chemical additives are mixed together in a Plant and hence the quality is guaranteed. |
| Customization: Most often the mortar that is produced is using the standard proportioned there no scope for making a customized mix. | Customization: Dry Mix mortars could be produced with a high degree of reliability and hence the properties can be customized based on the application |

3.2. Raw Material Composition

The raw material composition mainly consists of limestone accounting for 80% of the composition, this is followed by cement consisting of 12% of the raw material composition & sand 4.5%, hydrated lime 2.5% & additives 1.0%

Table 3-1: Raw Material Composition

| Raw Material | % |
|---------------|------|
| Limestone | 80% |
| Cement | 12% |
| Dune Sand | 4.5% |
| hydrated lime | 2.5% |
| Additives | 1% |

Source: TAG Survey raw material Suppliers & Producers

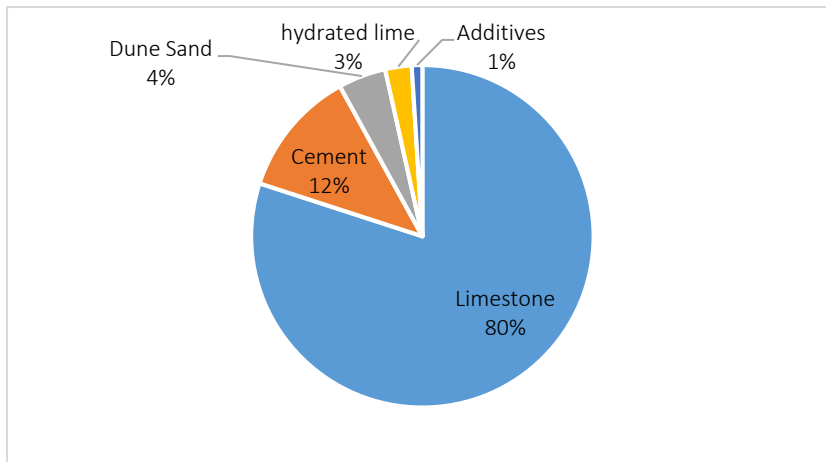

Figure 3-1: Raw Material Composition in %

3.3. Production Analysis

The production line in a typical Dry mix plant is vertical oriented and the silos for the raw materials are placed above the mixing unit. The raw materials go through a process of quality checks and then it is transported to various silos. The flow of material is through gravity along with appropriate weighing system. The fully automated unit ensures that the mixing unit is filled with required raw materials required for each formulation. The dry mix mortar once it comes out of the Plant goes through a quality check to ensure whether desired properties are obtained.

3.4. Production Flow Chart

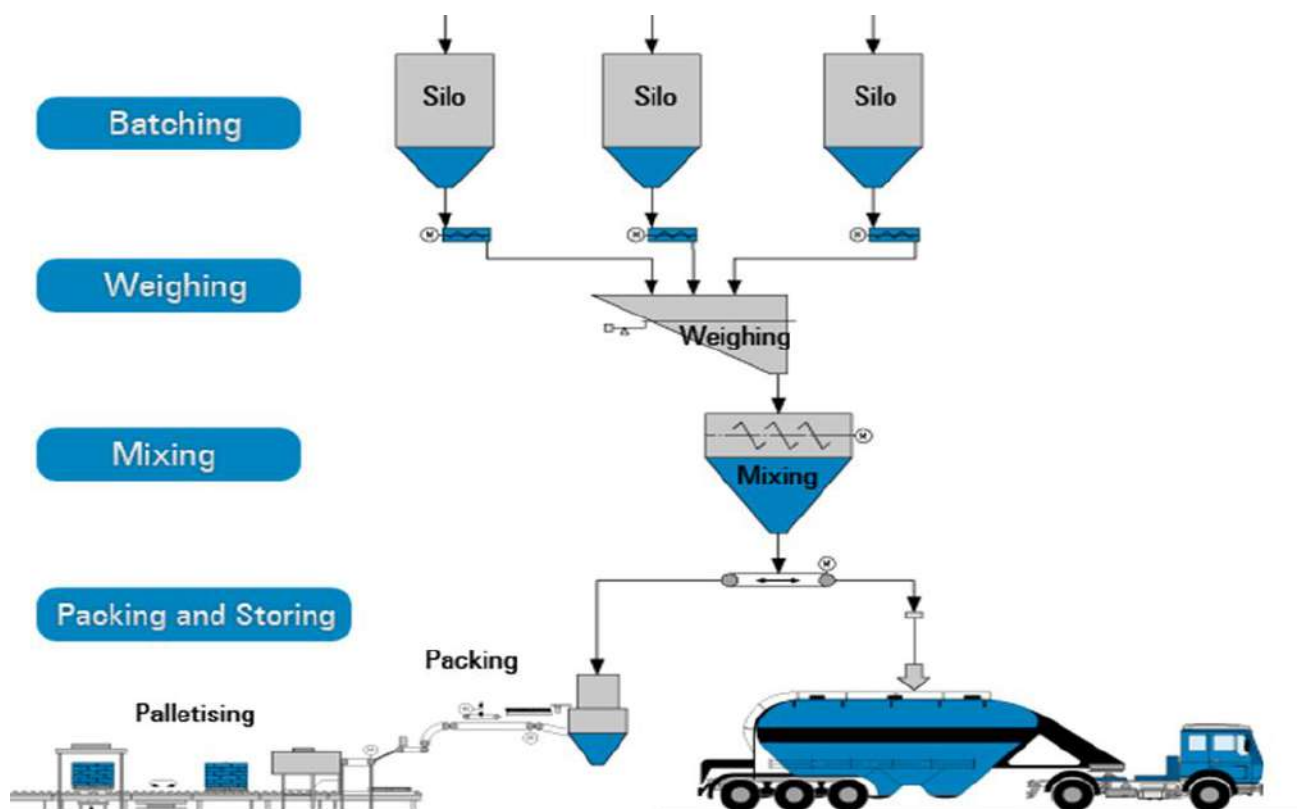

Figure 3-2: Production flow chart

3.5. Manpower

The manpower requirements are based on company industry experts experience to deem the plant operational.

The Omanisation percentage will be a minimum of 70% given the laborers account for 5 employees of the total 29 workforces.

Direct staff include employees responsible for the operational and production of the Dry Mix product and indirect staff include office staff.

Table 3-2: Direct Cost Manpower Requirements

| DIRECT COST MANPOWER REQUIREMENTS | | | | | | |
|-----------------------------------|---------------------|---------|------------------|-----------------|-----------------------|-------------|
| Si.No | Position | Numbers | Salary Per Month | Salary Per Year | Welfare Expenses @15% | Grand Total |
| 1 | Operations Manager | 1 | 1,400.00 | 16,800.00 | 2,520.00 | 19,320.00 |
| 2 | Supervisor | 2 | 750.00 | 18,000.00 | 2,700.00 | 20,700.00 |
| 3 | Engineer | 2 | 600.00 | 14,400.00 | 2,160.00 | 16,560.00 |
| 4 | Lab Technician | 2 | 450.00 | 10,800.00 | 1,620.00 | 12,420.00 |
| 5 | Driver Wheel Loader | 2 | 450.00 | 10,800.00 | 1,620.00 | 12,420.00 |

3.6. Organization Chart

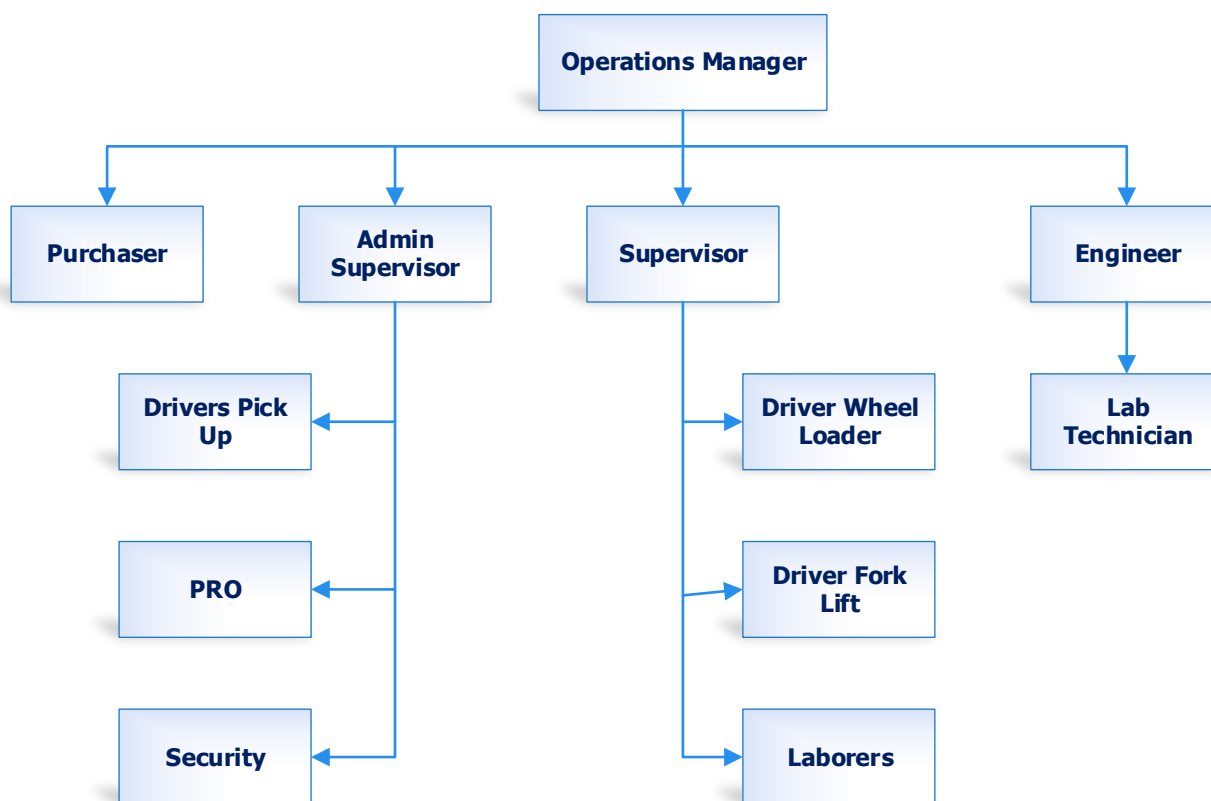

Figure 3-3: Organization chart

3.7. Project Time Frame

Table 3-4: Project time frame

| ACTIVITIES | TIME IN MONTHS | | | | | |
|-----------------|----------------|---|---|---|---|---|
| PLANT | 1 | 2 | 3 | 4 | 5 | 6 |
| • Design | | | | | | |
| • Manufacture | | | | | | |
| • Purchase | | | | | | |
| • Shipment | | | | | | |
| • Installation | | | | | | |
| • Commissioning | | | | | | |
| • Civil work | | | | | | |

The implementation of the project starts initially with the drawing of overall plant layout followed by civil works, procurement, delivery and installation. This requires a time frame of 6 months. In the first year of operation the plant is estimated to produce 38,400 Tons.

Financial Analysis

4.1. Cost of Investment Capex

The total cost of Main machinery amounts to 630,000 /RO sourced from a local machinery supplier.

Building cost is costed at minimum with a contingency of 3% for reasons of price fluctuation in construction material cost.

The total cost of vehicles amounts to 99,000 /RO source from a local vehicle supplier.

Table 4-1: Investment Capex

| Si. No. | Description | Quantity | Cost Per Unit OMR | Total Cost OMR |

Manpower

The manpower requirements are based on company industry experts experience to deem the plant operational.

The Omanization percentage will be a minimum of 40% given the laborers account for 12 employees of the total 29 workforce.

Direct staff include employees responsible for the operational and production of the Dry Mix product and indirect staff include office staff.

| DIRECT COST MANPOWER REQUIREMENTS | | | | | | |

The projections reveal the project will incur a net profit of 14,500 /RO in the first year of operation mainly due to the lower capacity utilisation of 40% and the initial fixed cost of 155,030 /RO covering direct expenses. The profitability is improved in the 2nd year of operation mainly due to the increase in capacities to 50% resulting in a net profit of 105,264 /RO and net profit is predicted to increase in region of 185,000/RO in the 3rd year with a revenue of more than 1.6 million RO. In the 6th year and onwards the net profit will average in the region of 400,000 RO per year.

4.4. Capacity Utilization

| | Year 1 | Year 2 | Year 3 | Year 4 | Year 5 | Year 6 | Year 7 | Year 8 | Year 9 | Year 10 |

| Production Outout Kg | 30,720,000 | 38,400,000 | 46,080,000 | 53,760,000 | 61,440,000 | 69,120,000 | 69,120,000 | 69,120,000 | 69,120,000 | 69,120,000 |
| Total No. Bulk Bags @ 1Ton | 30,720 | 38,400 | 46,080 | 53,760 | 61,440 | 69,120 | 69,120 | 69,120 | 69,120 | 69,120 |
| Revenue OMR | 768,000 | 960,000 | 1,152,000 | 1,344,000 | 1,536,000 | 1,728,000 | 1,728,000 | 1,728,000 | 1,728,000 | 1,728,000 |
| Grand Total Revenue OMR | 1,075,200 | 1,344,000 | 1,612,800 | 1,881,600 | 2,150,400 | 2,419,200 | 2,419,200 | 2,419,200 | 2,419,200 | 2,419,200 |

The capacity utilisation will start with 40% in year of operation and is forecasted to increase gradually by 10% y-o-, 1st year output amounts to 38,400 tons and reaching a capacity of 90% at 86,400 tons in the 6th year of operation.

The 50kg bags account for 20% of the total production output target mainly for the local market; this production output in year 1 will amount to 7,680 tons with a produce of 153,600 bags and due to capacity increase no of bags reaches 345,600 bags in year 7.

The Bulk (per ton) account for 80% of the total production output target mainly for the local construction companies; this production output in year 1 will amount to 30,720 tons and due to capacity increase reaches 69,120 tons in year 6.

4.16. Conclusion

- The production capacity in the 1st year is 40% and increases to a capacity of 50% in the 2nd year, thereafter the capacity utilization increases 10% y-o-y to reach 90% capacity utilization in the 6th year; these capacity utilizations results in the following revenues:
 - 1st year revenue amounts to **1.0 million OMR**
 - 2st year revenue amounts to **1.3 million OMR**
 - 3rd year revenue amounts to a total of **1.6 Million OMR**
- Reaching **2.4 Million OMR** in the 10th year.

The above revenue stream reveals the following net profit results:

- The 1st year net loss of **14,500 OMR**.
- 2nd year net-profit amounts to **105,264 OMR**.
- 3rd year net-profit amounts to **185,880 OMR**.
- 4th year net-profit amounts to **266,318 OMR**.
- 5th year net profit will be in region of **346,570 OMR**.
- 6th year net profit will be in region of **426,014 OMR**

Internal Rate of Return (IRR) = **24.58 %**.

NPV = **1.0 million OMR**.

Pay Back Period = **4 years 4 month**.

Figure 4-1: Projections Main Scenario - Revenue & Profit After Tax

| Financial Analysis Schedule Summary | | | | | | | | | | | IRR | NPV | Payback Period |

| Year | Year 1 | Year 2 | Year 3 | Year 4 | Year 5 | Year 6 | Year 7 | Year 8 | Year 9 | Year 10 | 24.58% | 1,1,032,639,686 | 4Years & 4 Month |
| Capacity | 40% | 50% | 60% | 70% | 80% | 90% | 90% | 90% | 90% | 90% | | | |
| Revenue | 1,075,200 | 1,344,000 | 1,612,800 | 1,881,600 | 2,150,400 | 2,419,200 | 2,419,200 | 2,419,200 | 2,419,200 | 2,419,200 | | | |
| Profit After Tax | 14,500 | 105,264 | 185,880 | 266,318 | 346,570 | 426,014 | 418,310 | 410,390 | 402,244 | 393,859 | | | |

- The project has a medium to high viability due to mainly the raw material availability in Oman.
- Dry mix has a good product range and is essential in the construction of buildings and in terms of the demand quantity locally and regionally
- New products can be developed and introduced in the market providing construction companies with not only ease of application and efficiency in construction processes but scope in environmental and sustainable products.
- Technology for this type of product in terms of application and ingredients to include chemicals is continually developing allows for innovative dry mix products to be researched & introduced.
- The local competition is minimal and provides an opportunity for this new entrant to establish themselves.
- The output in terms of capacity is estimated at the low side at 40% in year 1 along with selling price of 25/RO per ton instead of the market rate of 30 /RO per ton.
- The net profit is positive in year 1 at 1.35% & increases at relatively good levels as it reaches 7.8% in year 2, 11.5% in year 3, 14.5% in year 4 and reaches a maximum of 17.6% net profit in year 6.
- IRR is attractive at 24.58% and payback is acceptable at 4 years and 4 months.
